Total Energy & Mining Metrics (TOTEMM)

Need global energy and mining competitive and market intelligence data? Or, just a slice? New slice next week?

Is the energy transition difficult to understand and measure?

Ongoing Challenges

- Data and editorial are growing at an exponential rate; noise is overwhelming
- Traditional energy data providers are not changing fast enough
    - Information sources and reporting methods / metrics change daily; data often has no home
    - Editorial and self-reported data are often "use once"
        - Impossible to read all articles / docs and retain all info; practicing confirmation bias
- Objective competitive and market intelligence pictures are difficult to paint
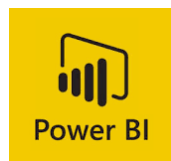

Our Solution

SETLD TOTEMM is our global competitive and market intelligence geospatial data product centered around capturing any type of data, homogenizing loose metrics and exposing new data relationships in easily consumable interfaces. We lever extreme data engineering and automation to reduce your need for time-consuming data aggregation, manual processing and painful hub-and-spoke analyses.

We deliver this data any way you like it, including: Raw Data, Services, ArcGIS Online, Power BI, Searchkit: search hundreds of millions of documents, etc.

SETLD TOTEMM is new age ENERGY TRANSITION information brought to you with the help of massive-scale datastores and modern interfaces!

Get SETLD TOTEMM today!
